Social Relief Blockchain (SRX)

Global FISH Fundraising Platform

F - Feed the Hungry
I - Imitate Authentic Love
S - Save the Lost
H - Heal the Sick

The purpose of SRX is to create a strong community of stakeholders that support the management of fundraising for volunteers, developers, nonprofits and NGOs that are actively working or establishing projects that meet the social needs of the world.

SRX stakeholders are responsible for regularly voting, volunteering, and establishing ratings for completed projects aligned with the FISH criteria.

Through the community driven social relief blockchain, we can accomplish the following:

Ensure fair distribution of funds to the issues around the world.
Ensure correct use of funds.
Ensure tomorrow is better than today.

In the following pages you will get more detail on how our communities, project creators and admin play an integral role in our mission, the roadmap of events and the types of social relief activities we will be doing in the coming months and years.

We are blessed and thankful you have taken the time to consider joining our team. I am confident that with your help, we can make a lasting impact on the future generations to come.

Index

FISH Meaning and Types of Activities

F - Feed the Hungry
I - Imitate Authentic Love
S - Save the Lost
H - Heal the Sick

Table 1.1 - FISH Intro

FISH	Problem	Promise	Example
Feed the Hungry	Millions of people globally struggle to get at least one meal a day and proper nutrients that support good health and longevity.	SRX and its ecosystem strive to feed, teach and work beside the hungry and undernourished.	-Weekly grocery and water deliveries -Food farms in remote areas -Aqueduct and well repairs
Imitate Authentic Love	Many today lack the community they need to build meaningful relationships that support happiness and longevity.	SRX and its ecosystem seek to build strong collaborative communities.	-Community gathering construction -Low to no income housing -School Construction
Save the Lost	Everyday people all around the world are being taken away against their free will from a healthy society.	SRX and its ecosystem seek to bring people back into the community and give them meaning.	-Save, shelter and mentor sex trafficking and drug victims -Save, shelter and mentor orphans -Save,shelter and mentor the widows
Heal the Sick	Thousands of communities around the world do not have the resources, doctors and medicines they need to heal the sick.	SRX and its ecosystem provide resources with a holistic approach to increase the happiness and longevity of each person in the community.	-Help communities with mass sickness outbreaks -Lay hands on the sick -Send doctors and medicines to remote areas of the world

*not limited to the activities in the above table.

Community

Purpose: unite volunteers, investors, developers and those in need together to a single larger community all focused on feeding the hungry, imitating authentic love, saving the lost and healing the sick.

Volunteers - From the beginning we were the hands and feet of Christ, taking his love out to the city. This fundamental has not and will not change. We have teams that go out all around the world to help others. One of our first priorities of products has to do with this. Read the products section of this whitepaper. Prayer: Matthew 9:38

Investors - Everyone will have the opportunity to invest in SRX initially through binance smart chain (BNB) and eventually its ecosystem through SRX's chain. An example of a successful implementation of this system is Brise/Bitgert on the BNB smart chain.

Developers - The SRX ecosystem will consist of revolutionary projects that help assist bringing heaven to earth. The blockchain will be safe, fast and cheap for developers and investors to work together on. SRX is unique as it gives developers and investors the opportunity to work together in its common goals.

SRX Tokenomics

Token Name - Social Relief Blockchain
Ticker Symbol - SRX
Total Supply - 1,000,000,000,000
Blockchain - Binance Smart Chain
Tax - 10%
Address -

5% - Social Relief -
The real fun starts with the active blockchain. But until then, we will take 5% of each buy and sell of SRX token and give to the regionalized teams to give towards our FISH mission. As funds are received, a determined frequency will be decided upon by the current stakeholders.

1% - Major Exchange Charity -
Lots of exchanges, coins and tokens try to raise money for charity. We would like to be a part of their endeavors as well. We lead by example so we encourage our developers, investors and volunteers in our ecosystem to partner with others.

* This item will not be activated until we enter our first Major Exchange - ie. binance usa, coinbase, etc. 1% will be added to the admin fee to help assist with the listing and early stage of product development.

1% - Liquidity
Adding tokens into the liquidity pool, creates more stability in price and allows everyone to be able to buy and sell freely without delays.

3% - Admin
If we want to make our tools we use to change the world and get the word out to build our communities, early on we need to spend a good portion of that on this. Once SRX chain is independent by itself, these taxes dwindle down to practically nothing.

Voting

There will be 2 phases of voting.

Initial phase all tax will be put into the dead account. These funds will be transferred to FISH activities as needed and decided by the community.

Voting contract phase. Our developers will set this up where each team can research, suggest and vote based on the contract stipulations.

Products

SRX Community Platform

Gives SRX volunteers, developers and investors the ability to connect, research, share ideas and vote on how social relief funds are used.

SRX Audit

SRX rates its own projects, as well as others to measure the projects ability to meet several secure, reliable and social relief factors

SRX Blockchain

SRX will give its developers and investors its own ecosystem/portfolio of projects our community can rally behind to change the world
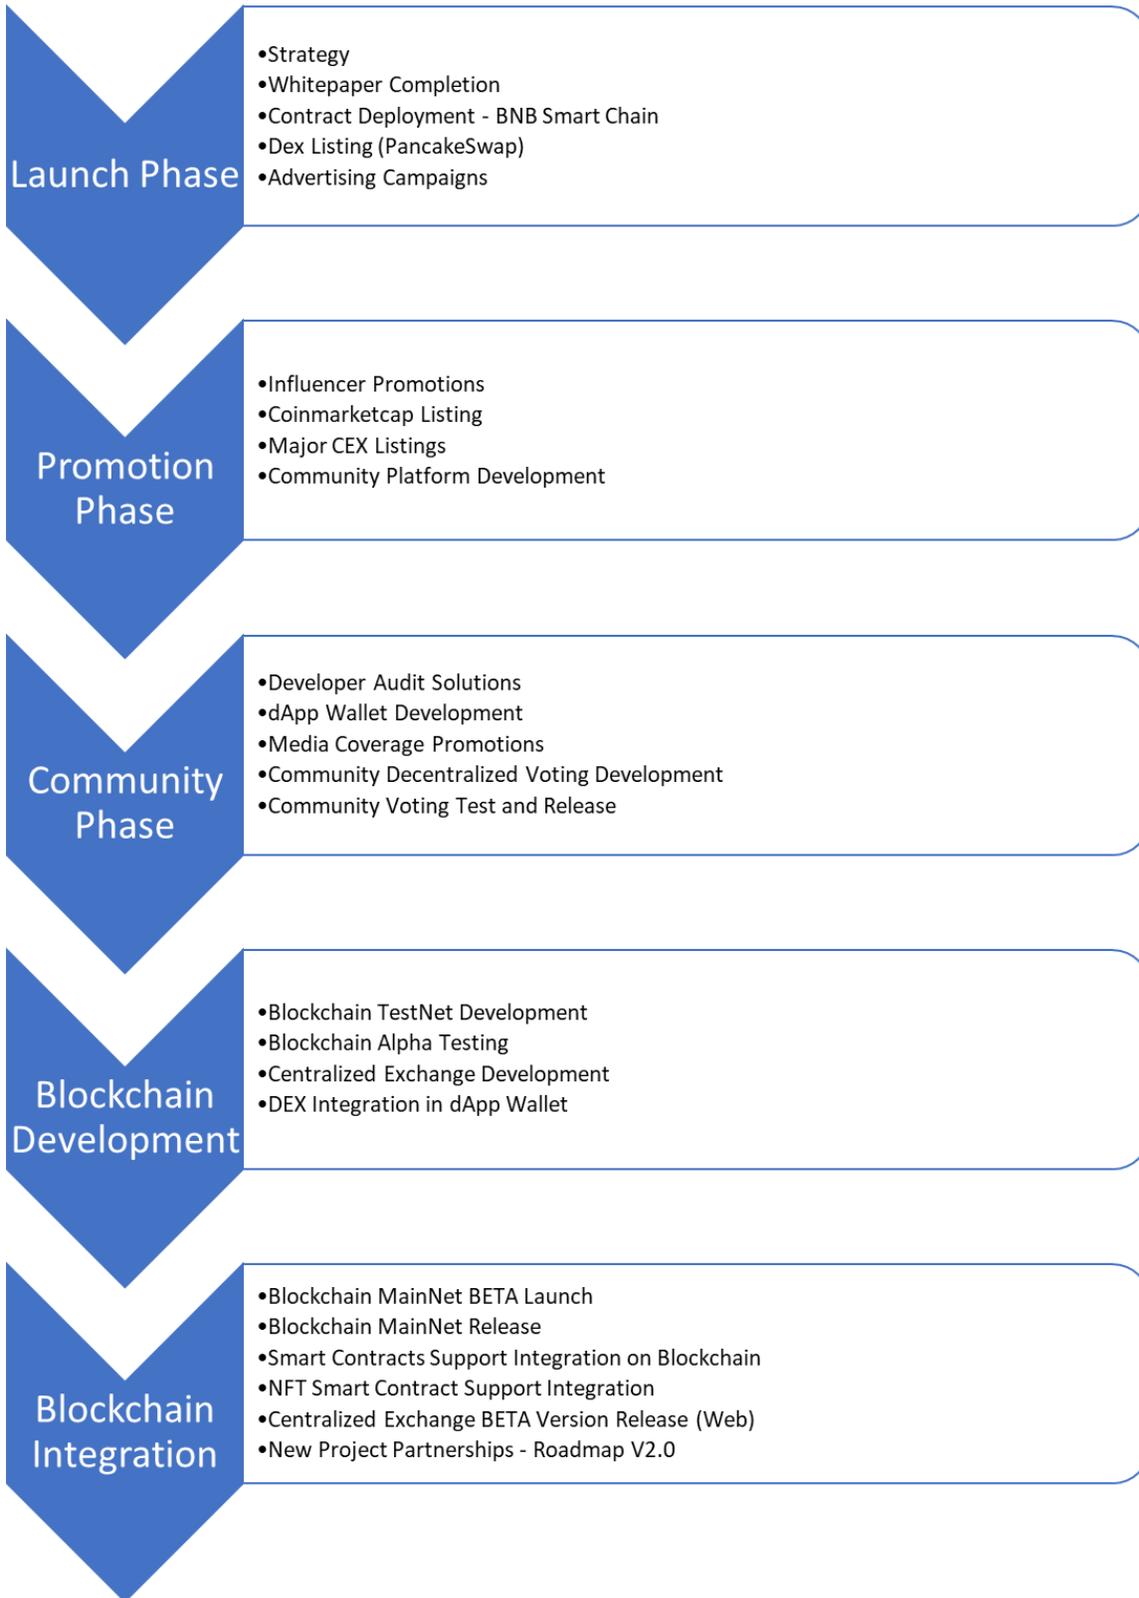

Marketing Plan

SRX marketing plans are based on each of the three types of groups we are looking to reach. SRX will compete in all three group categories on social media, popular news articles, tech conferences and community settings around the world. SRX focuses on the 9 stages of a prospect, lead and customer. We will modify activities in each stage as more data is gathered through the process.
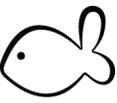

KYC Research - Know Your Customer

The SRX token has a unique blacklist function that allows it to make SRX solely about funding social relief projects and keeps away price manipulating bots. SRX wants investors that primary focus is on helping the world become a better place.

Roadmap

Launch Phase
- Strategy
- Whitepaper Completion
- Contract Deployment - BNB Smart Chain
- Dex Listing (PancakeSwap)
- Advertising Campaigns

Promotion Phase
- Influencer Promotions
- Coinmarketcap Listing
- Major CEX Listings
- Community Platform Development

Community Phase
- Developer Audit Solutions
- dApp Wallet Development
- Media Coverage Promotions
- Community Decentralized Voting Development
- Community Voting Test and Release

Blockchain Development
- Blockchain TestNet Development
- Blockchain Alpha Testing
- Centralized Exchange Development
- DEX Integration in dApp Wallet

Blockchain Integration
- Blockchain MainNet BETA Launch
- Blockchain MainNet Release
- Smart Contracts Support Integration on Blockchain
- NFT Smart Contract Support Integration
- Centralized Exchange BETA Version Release (Web)
- New Project Partnerships - Roadmap V2.0

FAQ - Knowledge Center

The goal of this page is to answer any questions you have about words, concepts and strategies within SRX.

Blockchain

A system that records transactions on a shared general ledger for Bitcoin or other alternative coins by computers within a peer to peer network linked to that coin.

Coin vs Token

Coin is a standard digital currency that can be used to receive and make payments with. A token is a derivative of that coin which is used to raise money for projects, collect rewards, ownership of tangible items.

SRX starts off as a token to help fund its project and then will bridge into a coin which will have its own blockchain and currency. Future state, SRX will have its own blockchain coin and hundreds of tokens/projects around the world that are derivatives of the SRX coin. Transaction fees from those projects will go towards Feeding the hungry, Imitating authentic love, Saving the lost and Healing the sick.

Centralization Vs Decentralization

Centralization is when one party or organization is in charge of all of the decisions, verification and holding of data. In the finance realm, this consists of how fiat currency (USD, British Pound, Euro, Indian Rupee, etc) supply is controlled by the banks and government.

Decentralization is when all of the above is not controlled by a central party. Investing in crypto currency allows holders to have a say in the direction, management and verification of all data within that currency.

SRX operates under decentralization. For any change in the underlying management after launch, 51% of the holders have to agree upon the correct path.

Ledger

A centralization ledger is between you and a centralized party, such as a bank.

A decentralized ledger is a ledger that is shared by the entire community of holders and is a public ledger for anyone to see. In order to create a transaction on the ledger, it most go through a decentralized process of accuracy from different parties to be able to be listed.

SRX utilizes the tested and approved consensus method of proof of stake authority. (POSA), from the BNB Smart Chain.

Proof of Stake Authority

Proof of Stake Authority as mentioned in the ledger section is a consensus method that allows for a transaction to be reported on the public ledger. If the transaction fails to meet these requirements, it will not be listed and the transaction will be canceled.

SRX token is currently under the BNB Smart Chain. BNB Smart Chain utilizes 21 validators that each have a minimum stake balance which gives them the opportunity to create a new block (transaction) on the ledger. Bitcoin and Ethereum utilize a different consensus which allows for more decentralization, but comes at a much higher cost and higher transaction time it takes to complete.

When SRX becomes its own blockchain, the community of holders will vote on the direction of the correct consensus method. The goal would be to make it as decentralized as possible, without giving up security, cost and speed.

Risks: What We Tell Our Family and Friends Before Investing

In addition to the above discussions. I tell them this is a great opportunity to invest in a revolutionary currency that will change the world and give them an opportunity to leave their legacy. However, this is still a cryptocurrency with extreme levels of volatility and to make sure the resources they use to invest are something they can handle losing if something out of our control happens in this space.

There are several things we cannot control completely - supply and demand, global government regulations, hackers, forks. SRX can have a positive impact on these by there marketing and security campaigns, they cannot control these with absolute certainty.

I suggest that they only invest what they are willing to lose. I use the example of giving towards a non profit with no expectation of receiving payment back and want them to invest in the mission of what this will accomplish vs the potential gains they could receive. SRX and cryptocurrency are just the means we use to change the world. Receiving significant capital gains might happen along the way for its investors, however that is not the primary goal of this project.
